

In the Specification

Please replace the paragraph on page 9 at line 15 with the following marked up paragraph:

B1
Figure 6 illustrates in one embodiment, a parent descriptor info block 700 for a root list placed in the root list descriptor extended information. The parent descriptor info block is placed at 810 of list descriptor 800 shown in **Figure 7**. The parent descriptor info block 700 includes root_list_identifier 750 used by the controller for accessing the parent entry. Fields such as compound_length 710, info_block_type 720, ~~and~~ primary_fields_length 730 and descriptor_specifier_type 740, are general info block fields of the parent descriptor info block 700. One embodiment embeds information about the parent list within the list descriptor.
